

QUICK-DOC

PRINTING SOLUTIONS

Management, design and organisation of documents and labels for IBM Power i

The Quick-DOC suite is the output management software for Power i systems. It allows the contents of any spool file to be reformatted and merged with additional data from the database, without re-programming of the original Power i application.

The software has initially been developed for IBM Power i users wanting to print on the latest modern (colour) laser printers - PCL - and label printers.

Fully compatible with most output formats (PCL, PDF, e-mail, TIFF...), Quick-DOC products guarantee that your graphic spools will be available in the formats required by your distribution tools: fax, e-mail, label and laser printers.

- Simple installation and easy to use
- Operational in a very short time
- Low CPU usage
- Easy to manage by your own IT staff
- Spool file management: merging/splitting
- Export to pdf, mail, fax
- Practical auto-archive solutions
- More than 1400 satisfied users worldwide
- 24/7 helpdesk available
- Reasonable pricing, fast ROI

QUICK-DOC

PRINTING SOLUTIONS

Manage all your spool files in a matter of a mouse click

QUICK-PRESS

A PRINTING SOLUTION

Quick-PRESS allows production of all documents linked to management information and operation applications: invoices, credit notes, pay slips, picking slips, delivery notes, product catalogues, statements of account, product data sheets or job tickets.

Unlike many other printer output solutions, all graphical functions are available. Quick-PRESS can apply a specific layout, depending on the content of the spool file. This enables conditional layouts if required. It is possible to send documents to different destinations, depending on the content of the print. The destination can be a printer, an e-mail address, a fax or a pdf document.

- Printing of graphics regardless of which model of laser, inkjet or thermal printer is being used
- Use of all the functions of your laser printers: input/output trays, double-sided, sorting machine, stacker, stapling...
- Generation of spool files in PDF format allowing transmission to fax, e-mail etc.
- Graphical user interface available
- Graphic functions: overlays, all fonts, special characters, logos, all international bar codes, graphs, images, OMR codes
- All the functions are carried out directly on the IBM Power i server without having to resort to an external server
- Insertion of external graphics or information from the database

QUICK-SPOOL

A PRINTING SOLUTION

Quick-SPOOL is a spool manager which can automate any pre-defined flow triggered by the appearance of spool files. One printing order can result in different ways of sorting your output (customer name, file number, project number) according to different criteria.

- No modification of the original spool files is needed
- Processes huge volumes with very low CPU consumption
- Different destinations of spools are possible: printing, e-mail, fax, archive
- Easy definition and processing of each output scenario
- Merging and splitting of spool files
- Reliable native IBM Power i product

QUICK-ARCHIV

A PRINTING SOLUTION

Once the spools have been generated by your applications, Quick-ARCHIV automatically stores them and adds them to indexes.

- Your spools are archived as objects: they are safe
- Instant access to all the archives, regardless of the volume
- Customization of the requests and authorizations by users or groups of users
- Re-printing, sending by fax / e-mail
- Back up spool files
- Data compression down to 20%
